Key Domain Hyaluronan-binding protein WF-HABP; OE-HABP; BM-HABP; proliferative condition; metastasis; inflammation; ischemia; host defence dysfunction; immune surveillance dysfunction; arthritis; A human hyaluronan-binding protein, designated WF-HABP 03-OCT-2000 Domain Domain Domain Domain Domain Domain Homo sapiens multiple sclerosis; autoimmunity; immune dysfunction; allergy (first 375..386 ~~re= "EGF-like t /note= " 943..954 551..564 /note= "EGF-like type 2 /note= "I 514..523 /note= "| 508..521 /note= "EGF-like type 2 Location/Qualifiers 344..353 /note= /note= entry) "cytochrome P450 cysteine haem-iron ligand binding domain" "EGF-like type 1 domain" "EGF-like type 2 "cytochrome "cytochrome P450 binding domain" type 1 domain" cysteine domain" domain" domain" haem-iron ligand

```
The present sequence represents a hyaluronan-binding protein. Specification describes four hyaluronan-binding protein, know WF-HABP, WF-HABP, OB-HABP, and BM-HABP. The polypeptides are for treating diseases such as proliferative conditions, metas

cc and which patients may need restorative therapy. The NOVX protein may calso be used as antigens in the production of antibodies (Abs) against convex and in assays to identify modulators of NOVX expression and cativity. The anti-NOVX Abs and antagonist are used to down regulate cexpression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOVI, expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or t supplement the patients own production of protein. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes i assays to detect and quantitate the presence of similar DNAs in samples. Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention diagnosis and treatment of diseases associated with inappropriate NOVX used to treat cancers, inflammatory disorders, immune disorders and cellular adhesion disorders. NOV6-10 are homologous to EGF-like fibrillin proteins and are used to treat cardiovascular disease e.g. hypertrophic cardiomyopathy, long-QT syndrome s sequence is the NOV8 protein. The invention relates to NOV1-NOV16 proteins, and their coding sequences. The proteins have They may be used to treat disorders associated with and marfan syndrome in the prevention, decreased ö

Cytostatic; continceptive; antiniflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decrease expression by recitiying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or supplement the patients own production of protein. They are used to produce NOVX profeins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes assays to detect and quantitate the presence of similar DNAs in samples and which patients may need restorative therapy. The NOVX protein may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                19-NOV-1999;

The anti-NOVX has and antagonist are used to down regulate CC expression and activity. The anti-NOVX Abs are used for detecting the CC presence of NOVX in samples. Disorders that may be prevented, diagnosed CC and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, CC NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites CC characteristic of serine/threonine kinases, and are used to treat CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC proliferation and contraception). NOV2-3, NOV6 and NOV8 are homologous to the epidermal growth factor (EGF)-like super family and are involved in, CC e.g. regulation of cell development, apoptosis, cell adhesion, growth CC used to treat cancers, inflammatory disorders, immune disorders and CC cellular adhesion disorders. NOV6-10 are homologous to EGF-like collular adhesion disorders. NOV6-10 are homologous to EGF-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 470;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                activity. The anti-NOVX Abs and antagonist are used to down regulate expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOVI, NOV3, NOV5, NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular proliferation and contraception). NOV2-3, NOV6 and NOV8 are homologous in the epidermal growth factor (EGF)-like super family and are involved in migration, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, inmune disorders and make the state of the super like the prolifer and motility and protein management.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes i assays to detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may also be used as antigens in the production of antibodies (Abs) against NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs and antagonist are used to down regulate

Cytostatic; contraceptive; antinfilammatory; immunomodilatory; and crime of diseases associated with inappropriate NOVX C diagnosis and treatment of diseases associated with inappropriate NOVX C expression. They may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome C that affect the activity of protein by expressing inactive proteins or to supplement the patients own production of protein acid into a cell and C culturing it to express the protein. The DNA may be used as DNA protein may c assays to detect and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may c activity. The anti-NOVX Abs and antagonist are used to down regulate c presence of NOVX in samples, Disorders that may be used for detecting the cexpression and activity. The anti-NOVX Abs are used to down regulate c presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, NOV9. Il and NOV13-16 have casein kinase II phosphorylation sites c characteristic of serine/threonine kinases, and are used to treat C winase-related disorders (e.g. Peutz-Jeghers syndrome, cellular collection, cell structure and motility and protein management, and are used to treat cused to treat cancers, inflammatory disorders, immune disorders and custoffers and are homologous to EGF-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       29-NOV-1999;

Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or to supplement the patients own production of protein. They are used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc produce NOVX proteins, by inserting the nucleic acid into a cell and cc culturing it to express the protein. The DNA may be used as DNA probes in Cc assays to detect and quantitate the presence of similar DNAs in samples, CC also be used as antigens in the production of antibodies (Abs) against CNOVX and in assays to identify modulators of NOVX expression and cativity. The anti-NOVX Abs and antagonist are used to down regulate expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed CC and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC proliferation and contraception). NOV2-3, NOV6 and NOV8 are homologous to the epidermal growth factor (EGF)-like super family and are involved in, e.g. regulation, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and are

                                                                                                                Ş
                                                                                                                                                                                                                                                                                                       Cytostatic; contraceptive; antinfiammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, conditions and treatment of diseases associated with inappropriate NOVX contraceptive; and diseases associated with inappropriate NOVX contraception. They may be used to treat disorders associated with decreased contraception. They may be used to treat disorders associated with decreased contraception. They may be used to to supplement the patients own production of protein. They are used to culturing it to express the protein. The DNA may be used as DNA probes in contraception in the protein. The DNA may be used as DNA probes in contractive protein and quantitate the presence of similar DNAs in samples, continuity. The anti-NOVX and in assays to identify modulators of NOVX expression and contraception and activity. The anti-NOVX abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed contracteristic of serine/threonine kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat contraception. NOV2 protein mov5.

CC NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat contraception. NOV2-3, NOV6 and NOV8 are homologous to the epidermal growth factor (EGF)-like super family and are involved in, e.g. regulation of cell development, apoptosis, cell adhesion, growth migration, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and cellular contraception. Contraception and are used to treat cancers, inflammatory disorders, immune disorders e.g. broaders and are used to treat cancers, inflammatory and are homologous to EGF-like contracted in treat cancers.

```
CC produce Novx proteins, by inserting the nucleic acid into a cell and CC culturing it to express the protein. The DNA may be used as DNA probes in CC assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and CC activity. The anti-NOVX Abs and antagonist are used to down regulate CC expression and activity. The anti-NOVX Abs are used for detecting the CC presence of NOVX in samples. Disorders that may be prevented, diagnosed CC and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5, CC (NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites CC characteristic of sering/threonine kinases, and are used to treat CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC the epidermal growth factor (REF)-like super family and are involved in, CC e.g. regulation of cell development, apoptosis, cell adhesion, growth CC used to treat cancers, inflammatory disorders, immune disorders and are CC used to treat cancers, inflammatory disorders, immune disorders and collinar adhesion disorders NOV6-10 are homologous to FEF-11ke.
                                           cellular adhesion disorders. NOV6-10 are homologous to EGF-like fibrillin proteins and are used to treat cardiovascular disease hypertrophic cardiomyopathy, long-QT syndrome and marfan syndrom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins of supplement the patients own production of protein. They are used to

RESULT 1
AAR05222
It is encoded by an open reading frame contained within the sequence of clone 533 which was derived from an E. tenella genomic library screened with radioactively labelled cDNA encoding the GX5401 antigen. It is of about 250 Kd. It carries several repeated peptide sequences and is rich in cysteine residues. The open reading frame also encodes a potential signal sequence for protein secretion. Also new are an expression vector contg. cloned gene, and host cells transformed with the vector. The transformed cells are used in a vaccine to immunise birds against avian coccidiosis. By labelling the peptides, they can be used as a type-specific probe. May also be used in an assay to detect a bagainst the coccidia. The Abs are used to identify transformed cells
                                                                                                                                                                                                                                                                                 Cloned gene or fragment encoding antigenic protein which binds with antibodies against avian coccidia. transformed cells used in vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1320

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABG06402
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT
cc polypeptide (II) sequences. (I) is useful as hybridisation probes, cc polymerase chain reaction (PCR) primers, oligomers, and for chromosome. cc and gene mapping, and in recombinant production of (II). The cc polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques ct or restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or cc quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical cmaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cc amino acid sequences. capable of detecting 1000 or more genes from Drosophila. The invent useful in developmental biology and in elucidating cell signalling cell cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from

The invention relates to an isolated nucleic acid detection reagent

                       This sequence represents the human Notch3 protein, a transmembrane receptor protein involved in lateral inhibition and regulating developmental cascades of neurogenic genes. Mutated Notch3 proteins are thought to be involved in neurological disorders, especially of the cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy (CADASIL) type. Blocking expression of a mutated Notch3 gene or by substitution therapy with non-mutated Notch3 gene or by substitution treat CADASIL or related disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; Notch3; transmembrane receptor; lateral inhibition; required developmental cascade; neurogenic gene; mutant; neurological discrebial autosomal dominant arteriopathy; subcortical infarct;
